fourter membrane protein) or their fragments. Pertactin present invention or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiqens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiqens an impaint issue and human or other animal cells, as well as biological animal tissue and human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the Bordetella in a material. The sequence is B. bronchiseptica pertactin outer membrane protein region II.
                                               present invention relates to Bordetella bronchiseptica pertactin

for Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions treating infections caused by Bordetella and in diagnostic methods Claim 26; Fig 1c; 47pp; English.

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fullds, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of

AAE16185
                                               A cosmid library was constructed by transforming E.coli HB101 with recombinant cosmids prepared by partial digestion of B.parapertussis chromosomal DNA with Sau3A and cloning of 40-50kb fragments into the BamHI site of cosmid pHC79. The cosmids were screened with a 1.8kb clai fragment from the pro gene of B.pertussis. The insert from one positive colony, harbouring cosmid pBD811, was sequenced and found to contain an open reading frame encoding a 922 amino acid protein with calculated mol.wt. 95.177. This precursor protein ("P95") is processed in vivo to the P70 antigen of apparent mol. wt. 70,000 as determined by SDS-PAGE, but with actual mol.wt. 61kv. Antigenic fragments of the protein will be useful in developing an accillular vaccine against B.parapertussis. Preferred fragments include amino acids Pro577 to Pro612 or Ala574 to Pro612.
                                                                                                                                                                                                                         Location/Qualifiers

WO200190143-A2. 29-NOV-2001. Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods

```
ï
                                                                        Couter membrane protein or their fragments. Pertactin (PRN) is used as an used to detect Bordetella antiques in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiques of in affinity chromatographic columns. Pertactin is useful as antiques an implicitly antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antiques can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. parapertussis pertactin outer membrane protein, p.70.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                     The present invention relates to Bordetella bronchiseptica pertactin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         621
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal calls, as well as bloogical fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B. bronchiseptica strain II-2 pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```
Couter membrane protein or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiquens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiquens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological animal tissue and human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein, p.68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B. bronchiseptica strain II-1 pertactin outer membrane protein region II.
                                                                                                                                pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P.68 antigen is formed by alternative cleavage of this protein.
P.68 is an outer membrane protein with a molecular weight of 68 kD which is associated with protection of piglets against atrophic rhinitis. The DNA sequence encoding these proteins was derived by standard recombinant DNA techniques using P.68 probes to isolate the

vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiqens in biological preparations or in purifying corresponding proteins, alycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                       ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiquens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiquens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological and to determine the concentration of Ab in those materials. Thus the antiquens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bronchiseptica strain II-7 pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiquens in biological preparations or in purifying corresponding proteins, givcoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiquent to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica
                                                                                                                                                                                                                                                                   	exttt{B.} bronchiseptica strain II-	exttt{B} pertactin outer membrane protein region II.

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (FRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, 4jycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological filuids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region II.

    B. bronchiseptica strain II-9 pertactin outer membrane protein region II.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antiblotic; antibacterial; region II.
                                                                                                                                                                                                                                                                                                                                                                                                                          Guiso-maclouf N, Boursaux-eude C;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 11

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 28, Application US/09041886
Patent No. 6235872
GENERAL INFORMATION:
APPLICANT: Bredesen, Dale E.
APPLICANT: Rabizadeh, Sharroz
TITLE OF INVENTION: Proapoptotic Peptides, Dependence
TITLE OF INVENTION: Polypeptides and Methods of Use
NUMBER OF SEQUENCES: 72
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Folice LLP
STREET: 4370 La Jolla Village Drive, Suite 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SOFTWARE: Patentin Release #1.0, Version #1.25

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /note= "contains 5 direct, tandem repeats" 575..612

Claim 1; Fig 1; 20pp; English.

```
The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin artibody is useful for treating Bordetella infections and used to detect Bordetella autigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PRN; outer membrane protein; vaccine; Bordetella infection;
                            recombinant cosmids prepared by partial digestion of B.parapertussis chromosomal DNA with Sau3A and cloning of 40-50kb fragments into the BamHI site of cosmid pHC79. The cosmids were screened with a 1.8kb claff fragment from the pro gene of B.pertussis. The insert from one positive colony, harbouring cosmid pBD811, was sequenced and found to contain an open reading frame encoding a 922 amino acid protein with calculated mol. wt. 95,177. This precursor protein ("P95") is processed in vivo to the P70 antigen of apparent mol. wt. 70,000 as determined by SDS-PAGE, but with actual mol. wt. 61kD. Antigenic fragments of the protein will be useful in developing an acellular vaccine against B.parapertussis. Preferred fragments include amino acids Pro577 to Pro612 or Ala574 to Pro612.
                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bordetella parapertussis pertactin outer membrane protein, p.70.

used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative of perfernination of Bordetella in a material. The present sequence is B. parapertussis pertactin outer membrane protein, p.70.

Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (FRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used in adfinity characterial antigens in biological preparations or in burlfying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fulids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the Bordetella in a material. The present sequence is B. pertussis pertactin outer membrane protein, p.69.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                protein; vaccine; Bordetella infection;
antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.

The invention relates to polypeptides derived from Bordetella pertussis pertactin (Prn1). The polypeptide is useful in the preparation of waccines against B. pertussis, B. parapertussis, B. bronchiseptica and other infectious diseases of mammals including diphtheria, tetanus, polio and infections caused by Haemophilus Influenza b. The polypeptide is especially useful for eliciting an immune response against Bordetella sp. Antibodies against the polypeptide may be used for pharmaceutical and/or diagnostic purposes, particularly for treating or preventing infections caused by Bordetella pertussis or Bordetella parapertussis. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, qlycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.

    bronchiseptica strain prn4 pertactin outer membrane protein region I.

                                                                                                                                                                                                                                                                                                                      Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods

    B. bronchiseptica strain I-2 pertactin outer membrane protein region I.

                                                                                           Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; region I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; region I.

Couter membrane protein or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antipgens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica
                                                                                                                                                                                                                                                                                  for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                  Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions itreating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to Bordetella bronchiseptica pertactin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5,

                                                                                                                                                                                                                                                                             The sequence given is the P.94 antigen from B. bronchiseptica. The P.68 antigen is formed by alternative cleavage of this protein. P.68 is an outer membrane protein with a molecular weight of 68 kD which is associated with protection of pighets against atrophic rhinitis. The DNA sequence encoding these proteins was derived by standard recombinant DNA techniques using P.68 probes to isolate the entire P.94 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bordetella bronchiseptica pertactin outer membrane protein, p.68.

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as bloogical fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials Thus the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vacchne. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Couter membrane protein or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiquens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antiquens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as biological and to determine the concentration of Ab in those materials. Thus the antiques can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.
animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal belis, as well as biological and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein region I.

The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in burifying corresponding proteins, glycoproteins or their mixtures when the in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the Bordetella in a material. The present sequence is B, bronchiseptica pertactin outer membrane protein region I.
                                                                                                                                                                                                                        B. bronchiseptica strain prn2 pertactin outer membrane protein region I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                           Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; region I.
